Billings, Montana.

H. E. Warner,
Supervisor,
Shelby, Montana

RESUME OF MONTANA OIL AND GAS OPERATIONS
FOR FISCAL YEAR ENDING OCTOBER 31, 1947.

During the present fiscal year both the proven oil and gas fields, and wildcat territory, have been as active as the limited supply of steel would permit. There were a total of 300 wells drilled in the State, of which 150 were commercial oil wells, 90 were commercial gas wells and 60 were dry.

Probably the outstanding development was the completion of the Sinclair-Wyoming Government #038541 Wilkins #1 in Section 28, Township 9 South Range 23 East, M.P.M., Northwest Elk Basin, with an initial production of 4,942 barrels of 32.2 gravity oil. This large production was found in the top of the Madison lime, while the Frontier sand contained commercial oil, the Dakota commercial gas, and the Tensleep wet gas distillate. The allowable for the Madison lime production is set at 1,000 barrels of oil per day. At present there are three wells drilling for this production in the area, and one for the Frontier sand oil. There is little doubt but that a large potential pool has been discovered here, which will increase Montana's daily average production greatly.

North of the above area, but south of Laural, the Mosser Dome field has been revived, and to date four wells have been completed here, with an initial production of about 100 barrels per day. About fourteen miles west and north of Rapelji, on the Six Shooter structure, one small gas well has been drilled in the Claggett formation, while three others have been drilled through the gas sand at 485 feet and pipe set with the idea of drilling to the Eagle sand for oil. Commercial gas has been found in the Frontier formation on this structure at about 1,700 feet, and it is possible the Six Shooter structure may be developed into a commercial oil and gas field during the coming year.

In the Sweet Grass Hills area the Texas Company is developing considerable sweet gas with their wild cat wells. If sufficient open flow is developed, they may decide to build a refinery for making gasoline and by-products out of natural gas.

The attached plates are a summary of the development work done in the oil and gas industry in Montana for the fiscal year ending October, 31, 1947.

PRODUCTION

Following is a tabulation of the production by fields for Montana during the fiscal year. The October production in this list has been estimated:

<u>FIELD</u>	<u>TOTAL</u>
Bears Den	3,088 barrels
Berthelote	793 "
Border	17,985 "
Cat Creek	553,874 "
Cut Bank	4,249,992 "
Dry Creek	135,006 "
Elk Basin	1,605,162 "
Flat Coulee	741 "
Frannie	17,252 "
Gage	59,892 "
Kevin-Sunburst	1,592,430 "
Lake Basin	4,790 "
Midway-Brady	909 "
Mosser	3,138 "
Pondera	314,474 "
Soap Creek	279 "
Whitlash	4,498 "
TOTAL - - -	8,564,305 barrels.

Both Cut Bank and Kevin-Sunburst fields declined in production from the preceding year. Cut Bank lost 1,049 barrels daily average, a drop of 383,132 barrels; while Kevin-Sunburst declined 619 barrels daily average; or 225,780 barrels for the year. Elk Basin increased from 1,310,941 barrels 1945-1946 to 1,605,162 barrels the past year, and Cat Creek increased from 445,225 to 553,874 barrels. The Pondera field showed an increase from 294,451 to 314,474 barrels.

In the State as a whole, the total output for all fields was 8,564,305 barrels, as compared with output for the preceding period of 8,827,003 barrels, a net decline of 262,695 barrels.

NORTHERN AREA PROVEN FIELDS

There were a total of 86 wells drilled in the Cut Bank field, of which 56 were producing oil wells, 17 producing gas wells and 13 dry. A number of wells drilled in the lime area encountered very good production, however this increase did not compensate for the decline in the Cut Bank sand wells. Seven wells were drilled in the gas area which encountered oil instead of gas as expected.

In the Kevin-Sunburst field, there were a total of 86 wells drilled, of which 71 were producing oil wells, 3 producing gas wells and 12 dry. This drilling did not extend the field, nor take care of the natural decline in production. 32 exhausted wells were plugged and abandoned to obtain pipe for new wells. Drilling was curtailed due to the lack of pipe, and experienced cable tool drillers.

Pondera field was active, with three wells drilled in adjacent outside areas in an effort to extend the field, which were unsuccessful. Of the 12 wells drilled in the field proper, 7 were producing oil wells, with 5 dry. Production was approximately 20,000 barrels more for the entire year.

SOUTHERN AREA PROVEN FIELDS

Elk Basin, Cat Creek, and Mosser fields were the only active proven fields in the southern area. The large Madison lime well at Elk Basin has started considerable activity, four new wells having started already. In Cat Creek there were ten oil wells, one dry hole drilled, two old shallow wells were drilled to deeper production, while four completed wells are testing and may possibly make producing wells.

At Mosser Dome, four oil wells were completed, with no dry holes. At present the Ohio Oil Company is drilling one well at Dry Creek, which is called a northwest extension for the field.

NORTHERN AREA WILD CAT WELLS

Wild catting has been very active in the Northern area the past year. The Union Oil Company, Texas Company, Farmers Union and others have been operating continuously. No completions have encountered oil that would, as yet, indicate a new field. The Texas Company completed three gas wells in the Sweet Grass Hills area, which are shut in, awaiting further developments now in progress. Several wells are drilling at present, with results not determined.

SOUTHERN AREA WILD CAT WELLS

There are several interesting wild cat wells drilling in this area. The Texas Company at Ragged Point admit a good show of oil in the Kirby sand at 4,400 feet, but do not admit it to be a commercial well at present. This hole is being carried down to test formations below the oil sand, and it may be several months before a test for production is made. At Procupine Dome the Ohio et. al., are held up with two large water flows, the latter being some 35,000 barrels of water per day. Pipe will be run to shut the water off as soon as the hole is reamed to bottom.

In the Custer area, Hunt is drilling near the top of the Madison Lime at 6,100 feet and to date has only had a show of oil and gas in the Dakota sand.

The Marcus Snyder et.al. well in the Hardin area has spudded and set surface pipe and is waiting for rotary tools, as is the Inland States Oil and Refining Company in the Warren area. Both of these will be interesting tests, and especially the Inland States since it could easily be a north extension of the Frannie field.

CEDAR CREEK & BOWDOIN

There were 15 commercial gas wells completed in the Cedar Creek field, one dry hole, and two old exhausted wells abandoned. At

Bowdoin 57 commercial gas wells were drilled, and 5 dry holes.

CONCLUSION

The demand for oil in the State greatly exceeds the present production with the result approximately 100,000 barrels of oil per month, is imported from Wyoming and Colorado, therefore it is safe to predict that development in proven fields, and wild catting will be carried on as actively, or more so, than in the past. Two new large refineries are being built in Billings, the Carter Oil Company erecting a refinery with a capacity of 20,000 barrels daily, and the Continental Oil Company one with a capacity of 7,500 barrels daily. With oil now selling at over \$2.00 per barrel, and little chance of a decrease in price in the near future, the drilling of wild cat wells will undoubtedly increase, in hope of finding new fields. Nearly all these wild cat wells will be drilled to deeper horizons, testing all formations to the granite.

There is probably more leasing activity at present than at any time since oil was first discovered in the State. The Phillips Petroleum have acquired the holdings of the Inland Empire Oil & Refining Company and are actively leasing for wild cat wells, while many major companies are, or have, acquired large blocks of leases, which will be tested at some future date.
